

AM-BOSS Big-Boss

Loft Ladders for Home, Office or Shop

Are you looking for somewhere to stash boxes at your home, office or shop?

One way to ease the clutter is to optimise your ceiling storage. Most people tend to avoid the ceiling because it can be difficult to reach safely. Nobody wants to risk falling off a rickety step-ladder while carrying a stack of heavy containers. Fortunately, AM-BOSS present a domestic series of loft ladders that allows you to safely access and utilise empty roof space.

Intelligent Design Features

A spring assisted mechanism allows for quick and easy operation. The quality of our product and our quality control procedure means that we are able to offer a 20-year warranty on all of our aluminium domestic loft ladders.*

All steel parts, including springs, are zinc plated. The ladder is mounted so that it allows clearance between the steps and the ceiling hatch for safer footing.

Standard and full-length handrails are also available. Dust and draught sealing strips, as well as slim-fitted architraves, are typical components, too. All models feature concealed hinges and the complete range is adjustable and easy to install.

The ingenious spring counter balance system is designed in such a way that when the hatch is closed the tension on individual components is minimal ensuring life-long service.

Quality Products

It is in all of our interests to supply an outstanding product that you can rely on. AM-BOSS is not only 100 percent Australian owned and made, but we were the first and are still the only manufacturer of tread-style loft ladders that comply with the Building Code of Australia, and which are Codemark Certified through the National Construction Code Codemark Certification Scheme.

The 'Big-Boss' is manufactured in welded aluminium with non-slip treads and has a wider opening width of 724 millimeters at the ceiling.

Big-Boss comes fully assembled and include concealed hinges, draft seals, counter-balancing and neat metal architraves.

Each unit comes complete with operation and maintenance instructions, installation guidelines as well as a hook and pole to manually operate the unit. We have off-the-shelf models to suit ceiling heights up to 3.6m but make models up to 5.8m.

*(Domestic installations only)
